Breaking: Investment bankers crunching numbers on a possible [@tiktok_us](#) sale say the deal leaves out the thorny detail of whether the CCP and will it give up its spy-craft algo, which is a must for any buyer. The algo—in addition to its espionage usage—also generates the targeted user content that makes the app work from a biz standpoint. I have my doubts. The reason: When was the last time the Chinese government has given up anything in its quest for world domination?

TikTok
China vs USA
Ethereum

Spot-on, [@CGasparino](#)! CCP stops at nothing for global control—TikTok, Ethereum, you name it. They're on a path to dominate finance & possibly the monetary system. Ethereum & Prometheus now hold exclusive rights over digital assets IN THE U.S., thanks to the SEC. And guess what? Both are under the grip of a CCP-affiliated powerhouse. [@GaryGensler](#), care to shed some light on this?
